IN|TRAXX Track Facts: Solutions Storage SafePaks

SafePaks are **robust** hard-shelled cases lined with **PouchMount** carriers which secure individual **SafePouches** to the interior of the case. Contents may be accessed while the SafePak is mounted to the wall, or it can easily be removed and used on-scene away from the vehicle.

SafePaks and SafePouches provide **Improved Inventory Control**, modular SafePouches allow quick refilling of supplies, better visibility of supplies, reducing duplication, waste, and expired supplies.

Modularity allows supplies within the SafePaks to be repositioned quickly and moved to have supplies exactly where you want them.

Individual SafePouches isolate potential contamination limiting the exposure of expensive supplies. SafePaks and Pouches can be **decontaminated** quickly and easily to return to service as needed.

SafePaks are available in **RED BLUE** and **WHITE**.

SafePak Features

- A **clear ID pocket** on the outside of the case provides easy identification.
- Glossy **hard-shell** finish is easy to clean and disinfect.
- **Magnetised** carry handles clip neatly together and separate easily.
- The case is closed with a strong double-ended zip featuring **easy-pull loops**.
- The SafePak has proven very effective at **keeping contents clean** in dusty environments.
- Both halves of the case open flat for **unimpeded access** to interior pouches and supplies.
- The two side handles incorporated in the large-sized SafePak enables ergonomic-friendly handling in-vehicle and in the field
- Supplied with a complete set of SafePouches
- **Unparalleled decontamination** capabilities.
